Experiment 6 - Strings

Python Lab Manual — Program and Output

EX. NO: 6(a) — Reverse a string

PROGRAM

```
def reverse(string):
    string = string[::-1]
    return string

s = input("Enter a string: ")
print("The original string is ", end="")
print(s)
print("The reversed string (using extended slice syntax) is ", end="")
print(reverse(s))
```

OUTPUT

```
Enter a string: Firstyearcse
The original string is Firstyearcse
The reversed string (using extended slice syntax) is escraeytsriF
```

EX. NO: 6(b) — Palindrome

PROGRAM

```
def isPalindrome(s):
    return s == s[::-1]

s = input("Enter the string: ")
ans = isPalindrome(s)

if ans:
    print("The string is palindrome")
else:
    print("The string is not a palindrome")
```

OUTPUT

```
Enter the string: madam
The string is palindrome
```

EX. NO: 6(c) — Character count

PROGRAM

```
input_string = input("Enter a string: ")
count = 0

for c in input_string:
    if c.isspace() != True:
        count = count + 1

print("Total number of characters: ", count)
```

OUTPUT

```
Enter a string: Hello, world!
Total number of characters: 12
```
